

TANISHQ SONI

Data Scientist · Machine Learning Engineer

Python | Machine Learning | SQL | Generative AI | MLOps
+91 8824212520 | tanishqsoni81@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data professional with 2+ years building production data and machine learning systems, now focused on full-cycle data science. Owned an end-to-end demand forecasting model (XGBoost with engineered lag and rolling-window features) that cut prediction error by 25% over manual baselines, directly supporting inventory planning, and shipped LLM-powered tooling that lets non-technical teams query analytics in natural language. Brings working knowledge of supply chain and inventory operations, covering the full inventory lifecycle from procurement to dispatch and returns, gained through close work with operations teams. Comfortable across the full ML workflow, from feature engineering in Pandas to model training and evaluation in Scikit-learn and deploying validated pipelines to production databases. Seeking a Data Scientist / ML Engineer role to deepen modeling and experimentation work within a strong team.

TECHNICAL SKILLS

Machine Learning: Scikit-learn, XGBoost · Regression, Classification, Time-Series Forecasting (ARIMA, SARIMA, Prophet) · Feature Engineering, Model Evaluation

Generative AI & NLP: LLM APIs (Gemini, Perplexity), LangChain, Prompt Engineering, RAG prototyping · NLTK, TF-IDF, BERT

Programming: Python (Pandas, NumPy, Scikit-learn, SQLAlchemy, Requests, Pydantic), SQL

MLOps & Data Engineering: ETL Pipelines, Workflow Automation (Cron), Data Validation, AWS (S3, EC2), Git, Postman

Databases & Visualization: PostgreSQL, SQL Server · Power BI (DAX, Power Query), Tableau, Matplotlib, Seaborn, Excel

Domain Knowledge: Supply Chain & Inventory Analytics (demand forecasting, inventory lifecycle, stock movement, order-to-delivery flow), Retail & Fintech

PROFESSIONAL EXPERIENCE

Data Analyst, Machine Learning & Automation · Maxima Apparel, Gurugram *Jan 2025 to Present*

- Owned the development and deployment of a demand forecasting model using XGBoost on historical order data, engineering lag features and rolling-window averages, reducing prediction error by 25% versus prior manual estimates and directly supporting inventory planning decisions.
- Partnered with the operations team on supply chain and inventory analytics, building SQL-based reports on stock levels, stock movement, and order-to-delivery timelines across the full inventory lifecycle (procurement, stock inward, allocation, dispatch, and returns).
- Designed and shipped an internal LLM-powered analytics assistant (Gemini API via LangChain) that translates natural-language business questions into queries against the analytics database, adopted by the team for ad-hoc analysis.
- Engineered Python and SQL ETL pipelines automating daily extraction and loading from SQL Server to PostgreSQL, cutting several hours of manual reporting work per week across 5 departments.
- Delivered 12 Power BI dashboards (DAX: YTD, YoY, MoM) and an internal SQL execution tool adopted by 25+ users, making day-to-day query turnaround noticeably faster and supporting analytics across sales, operations, and finance.

Business Analyst · Drona Pay, Mumbai *May 2024 to Oct 2024*

- Engaged directly with clients to gather requirements, then built, tested, and deployed JSON-based fraud-risk rule logic, translating business rules into threshold conditions used in production across 3 fintech implementations.
- Designed and executed multiple Postman test cases for every rule build, validating logic across scenarios and edge cases before client rollouts, and verified 30+ REST API endpoints to ensure reliable cross-system integration.
- Automated 5 business workflows (KYC verification, loan-approval routing, repayment reminders) with Camunda BPM, removing repetitive manual steps and improving SLA turnaround.
- Developed Python scripts for SQL log analysis to surface system anomalies and speed up incident resolution in deployed logic.

Data Analytics Intern · KPMG (Remote) *Jun 2023 to Aug 2023*

- Conducted data-quality assessment on client datasets and built visualizations supporting strategic recommendations.

PROJECTS

Automated Sports Data Pipeline · Python · Perplexity API · Odds API · Pandas · SQLAlchemy · PostgreSQL

- Built a fully automated daily pipeline pulling live MLB and NHL data from the Odds API and Perplexity LLM API, cleaning it with Pandas and persisting to PostgreSQL, scheduled hands-free via Cron.
- Added Pydantic validation so malformed API responses are logged and isolated rather than breaking the pipeline, improving reliability and fault tolerance.

Booking Analytics Report · Power BI · SQL Server · DAX · Power Query

- Designed a 60-page report over 2M+ booking records (3 financial years) using 30+ SQL queries and 45+ DAX measures for revenue-trend analysis.
- Applied Power Query transformations to cut model refresh time by 40%, replacing a manual weekly Excel process now used daily by 5 departments.

Recommendation Engine (Collaborative + Content-Based Hybrid) · Python · Scikit-learn · Surprise · TF-IDF

- Built a collaborative-filtering recommender using SVD matrix factorization on a public movie-ratings dataset, generating top-N recommendations per user.
- Added a content-based layer (TF-IDF on item descriptions) and combined scores via weighted averaging, where the hybrid model improved recommendation relevance on the held-out test split.

EDUCATION

Master of Computer Applications, AI & Machine Learning

GPA: 8.3 / 10

Vivekananda Global University, Jaipur · 2022 to 2024

Bachelor of Computer Applications

76%

University of Rajasthan, Jaipur · 2019 to 2022

CERTIFICATIONS

- ML Pipelines with Azure ML Studio (Coursera) · Data Analysis with Python & R (IBM)
- Tableau Desktop Certified Professional (Intellipaat) · Foundations of Business Intelligence (Coursera)
